Aaon provides information on a maximum of 252 parts. Click on any Aaon search section, they will display detailed information consisting of a part number, sample code, price and description for your reference to the easy budget for purchases. AAON units RN series - HVAG speech heating, air. I've had problems with the RN series of the 30-ton AAON unit. For some reason, it seems to trip over head pressure 2-3 times a day. Now I've reviewed the indictment, which was weighed according to the specifications. AAON RN Series Rooftop Units continues to lead the packaged roofing industry in performance and usability. Double wall rigid polyurethane foam insulated cabinet structure and straight drive backward curved plenum fans allow RN series units to have quiet, energy-efficient airflow with high static pressure properties. The RN series units also have lockable hinge doors that provide service connection to all parts of the device. Here are the repair parts and diagrams of the Aaon RCG-0601 roof unit. The charts below can help you find the right part. If you want help, we invite you to call our customer service number at the top of the page or click chat. On this page you will also find user guides, installation guides and error code tables related to this template. For more information about diagnosing problems with equipment, lawn and gardening equipment, as well as other products, see the videos, repair guides and articles in our self-made section. AAON RM-030 Owner's Manual Hey guys, I've had problems with the RN series of the 30 ton AAON unit. For some reason, it seems to trip over head pressure 2-3 times a day. Now I checked the charge, which was weighed according to the records. I have confirmed that all three of the condenser fans are operating in the right round. I've cleaned the condenser con a few times, but still the first step stumbles upon a manual high pressure switch All the help here would be welcome! I use the sporan stepper engine tool (I can't remember the part #) to reopen the valves for heating and then closed again for heating. If the pressure on the head decreases during reheating, it will increase to high during condenser operation, possibly one of the valves on the step motor will not open completely. There's a dip switch kit to use the step motors, but I don't know it from the hand. I have had to replace V/ve or two in seven years, which is not a common thing, but they can fail or remain half open. I replaced FCS, and without luck the first stage stumbled again! This may be a stupid question, but are there any new OFM's? The ratings of aftermarket engines may add up, but they overheat and stumble upon overheating. Honestly, I thought I'd do a very deep cleaning of condensers inside and out and see if it works. (probably right after the holiday) They're still the original fan motors on the device. I don't have chemical cleaning solvents for coils. Today I'm going to take the download back, clean the coils and put a void on it, download and see what happens. The only problem is when another technician claims to have cleaned the coils and pressed the right charge, I usually rely on that technology work. I changed the switch between FCS and HP and still have issues! AAON roof units are designed for performance, flexibility and usability. Double wall rigid polyurethane foam insulated cabinet structure and straight drive backwards curved cabinet fans units quiet, energy efficient airflow with high static pressure properties. Lockable hinge doors provide easy access to all parts of the device for maintenance.
